PAGE & PETAL

DIGITAL LIBRARY & ONLINE BOOKSTORE

PROJECT REPORT

A responsive web interface for discovering, searching and browsing books across a curated digital library.

Prepared from the supplied HTML project source

Includes project overview, features, applications, source code and output screenshots.

1. Introduction

Page & Petal is a web-based digital library and online bookstore interface designed to help readers discover books and explore a curated collection. The website presents a welcoming home page, featured book cards, category browsing, search and filtering controls, a structured catalog, library rules and a membership-interest form.

The interface uses a clear navigation bar and responsive page sections to organize information. Each book entry displays its title, author, category, short description, price, ISBN and availability status. The design aims to make browsing simple and readable on desktop, tablet and mobile screens.

2. Key Features

Navigation and hero section

Provides links to Home, Books, Catalog and Library Rules, with a prominent introduction and calls to action.

Search and filters

Allows visitors to search by book title or author and filter the collection by category and availability.

Book categories

Groups titles into Fiction, Self-Help, Technology and Classics for easier discovery.

Featured book cards

Displays cover images, labels, titles, authors, descriptions, prices and availability.

Catalog table

Presents book details and ISBN information in a compact, structured inventory view.

Library rules

Explains borrowing period, on-time returns, book care and quiet-space expectations.

Membership form

Collects a visitor's name, email address and favourite category as a demo membership enquiry.

Responsive layout

Uses flexible grids and media queries so the interface adapts to different screen widths.

3. Applications

The Page & Petal interface can be used as a front-end prototype or starting point for several book and library-related services:

• Digital library portals that display curated book collections and availability.

• Online bookstores that present book details, categories and illustrative prices.

• School, college or community library websites for browsing a sample catalog.

• Reading clubs and literary communities that promote books and collect membership interest.

• Educational demonstrations of HTML page structure, CSS styling, responsive design and JavaScript-based filtering.

4. Conclusion

Page & Petal brings together book discovery, category browsing, searchable listings and catalog information in one organized interface. Its featured cards, availability labels, library rules and membership form demonstrate common elements of a digital library website. The responsive layout supports use across different screen sizes, while the search and filter controls make the sample collection easier to explore.

The supplied HTML links to separate style.css and script.js files. Matching supporting CSS and JavaScript have been added to this report package to render the design and demonstrate filtering, reset controls, category selection and membership-form feedback. The supplied source does not include a server, database, real account system, payment processing or live inventory; those could be developed as future extensions.

Future scope

Possible improvements include connecting the catalog to a database, adding user authentication, enabling real borrowing and return workflows, integrating payment or reservation services, and providing administrator tools to manage books and stock.

Note: Book prices and availability shown in the supplied HTML are sample project data.

5. Source Code

The HTML below is the supplied project source. The stylesheet and JavaScript follow as supporting files so the report forms a complete runnable front-end example.
